

Check Point Unified Security

Defend your endpoints, data center and cloud with multilayered protection.

Insight 

 CHECK POINT™

Modern threats require advanced protection.

The cybersecurity threatscape is evolving, with cyberattacks growing more sophisticated — and harder to detect — by the day.

93%

The share of companies where an external attacker is able to breach the network perimeter and gain access to local network resources, according to a recent study by Positive Technologies¹

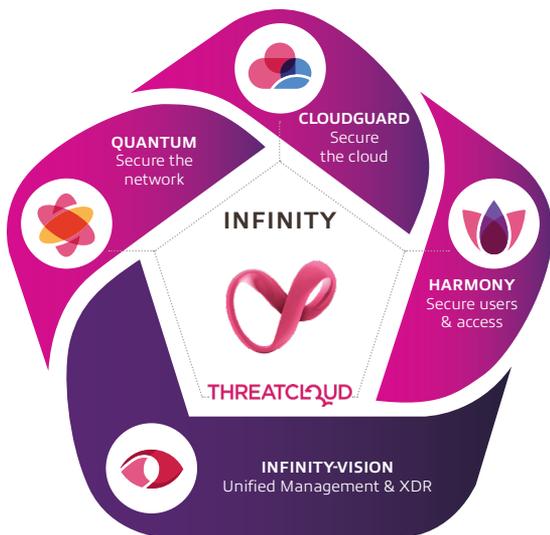

Despite the growing risk, many businesses still lack a comprehensive security plan. With the rise of dispersed teammates, expanded data and increased cloud workflows, it's vital that your business has multi-faceted security solutions in place.

Infinitely secure

Meet Check Point's unified cybersecurity.

Staying secure in times of uncertainty requires end-to-end protection. Check Point is a leading provider of cybersecurity solutions, protecting over 100,000 organizations with an industry-leading catch rate of malware, ransomware and other attack forms.

Available from Insight, Check Point offers a multi-level security architecture to defend endpoints, data centers and the cloud — all managed through the **Infinity-Vision console**.

Combined with Insight's expertise in future forecasting, consistent compliance and strategic alignment, you'll operate with comprehensive cybersecurity.

In this ebook, we'll explore Check Point's security pillars and their unique benefits for your organization.

Quantum network security

Network traffic is growing 25% year over year (doubling itself every three years), and 90% of this web traffic is encrypted.² How can you inspect and protect it all?

Check Point Quantum™ Network Security provides ultra-scalable protection against Gen V cyberattacks on your network, cloud, data center, Internet of Things (IoT) and remote users. Quantum provides the highest level of security to prevent zero-day attacks.

Quantum Next Generation Firewall Security Gateways™ combine SandBlast threat prevention, hyper-scale networking, a unified management platform, remote access VPN and IoT security to protect against the most sophisticated attacks.

These advanced firewalls provide:

- Uncompromising security
- Protection at hyperscale
- Unified defense

Leading innovation

Did you know Check Point created the first stateful inspection firewall technology?

The company continues to innovate, providing clients with powerful security solutions.

CloudGuard for cloud native security

Achieve intelligent threat prevention with Check Point CloudGuard. From code to cloud, this solution offers unified cloud-native security across applications, workloads and networks.

CloudGuard protects and prevents threats across AWS®, Azure®, Google, VMware®, IBM® Cloud, Oracle® Cloud, Alibaba Cloud, Kubernetes and more — all from one, unified platform. This comprehensive solution provides a centralized visualization for all cloud traffic, security alerts, assets and auto-remediation.

You'll enjoy:

- Threat prevention and high-fidelity posture management
- Multicloud security from DevOps to production
- Visibility, intelligence and threat prevention under one platform

Check Point Harmony

In a recent report, 57% of 1200 security professionals reported that half their workforce works remotely at least two days a week.³ And remote work is good for business: According to a global survey, 94% agree that hybrid work helps with talent recruitment and competitiveness.⁴

But, with employees switching back and forth between home and office networks, security must be all-encompassing.

Piecing together security solutions to cover every aspect of remote work can leave gaps in your architecture — not to mention the difficulty in managing various solutions. Check Point makes it easy.

Harmony unifies six cloud-based security products to keep your remote workforce protected:

Endpoint security

Email security

Clientless connectivity

Secure internet browsing

Virtual Private Network (VPN) access

Mobile security

This scalable, easy-to-manage solution protects your hybrid team while saving you overhead.

Infinity-Vision unified security management

From a single pane of glass, you'll manage your entire security environment and ensure that your organization can prevent breaches.

Infinity-Vision powers the Check Point Infinity architecture. This unified management platform was built to prevent even the most sophisticated cyberattacks across networks, cloud, endpoints, mobile and IoT.

Powered by the world's largest threat intelligence network, Infinity-Vision offers:

- Real-time threat intelligence powered by Artificial Intelligence (AI)
- Centrally controlled policy management, monitoring and response
- The ability to expose and shut down attacks faster with 99.9% precision

This unified management, paired with Insight's deep expertise in cybersecurity, provides protection across your entire IT environment. By consolidating your security architecture, you'll enhance your overall defense and scale with ease.
